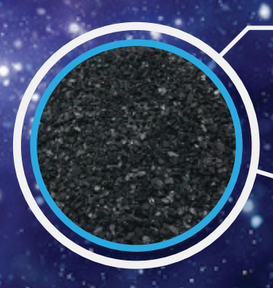
STRATOSPHERE TECHNOLOGY

CATALYTIC CARBON



Has a chemically modified surface where the resulting carbon offers enhanced catalytic capability.

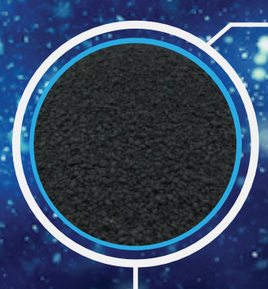
It is by catalytic action that this type of carbon removes chloramine.

Chloramine is the most commonly used disinfectant for drinking water

Dangers of Chloramines in your water supply

- Converting free chlorine to chloramines can release lead deposits into household plumbing.
- In children, it can cause behavior and learning problems, slowed growth, and anemia.
- In adults, it has been found to cause skin rashes, breathing problems, and in rare cases, ingestion of lead can cause seizures, and even death.

GERMAN MEDIA



HIGH PERFORMANCE GERMAN MEDIA

German Media possesses a revolutionary catalyst with the highest negative charged surface of hydrolysis and for ion splitting

It filters:
< 3 microns, suspended solids, sediments, turbidity and odor

It removes:
Iron, manganese, hydrogen Sulfide, Arsenic, Radium, Heavy Metals, Radio Nuclides

Health Risks of Minerals and Chemicals in Drinking Water:

- Iron: produces reddish brown slime or sludge.
- Manganese: developmental problems in children.
- Hydrogen Sulfide: causes dehydration.
- Arsenic: cancer, high blood pressure, heart disease, etc.
- Radium: can cause bone, liver and breast cancer.
- Heavy Metals: cancer, organ and nerve damage.
- Radio Nuclides: higher risk of getting cancer.

PUROLITE RESIN

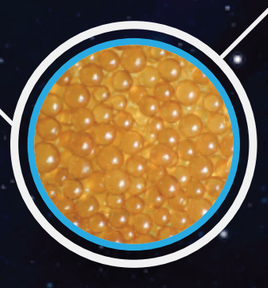
Purolite Resin is the mark of excellence in the water softener industry. It is engineered to allow it to be extremely effective in the water softening process. Although this resin is outrageously expensive, it is actually very cost-effective in terms of consistent high-quality output generated, per quantity of resin used. The water quality produced by this media is 10 times better than that produced by standard resin.

Advantages

- Highly effective chemical removal
- Highly effective mineral removal
- Highest salt efficiency
- Highly economical water use

Principal Applications

- Residential softening
- Industrial softening
- Food and beverage processing
- Demineralization



Regulatory Approvals Certified by the WQA to NSF/ANSI-61Standard

ALKALINE MEDIA

Far Infrared	Promotes the growth and health of cells and strengthens various organs in our bodies
ORP	Attacks dangerous free radicals and stops them from harming healthy cells in our bodies
Maifan	Removes mercury, lead, cadmium, arsenic heavy metals, and chlorine, while releasing essential minerals into water
Tourmaline	Able to boost immune system and promotes detoxification
Ions Exchange	Helps bacteria reduction

PH The pH level is a number that measures how acidic or alkaline a substance is. Alkaline Ceramic Balls regulate the acidity of water, resulting in alkaline water, which helps people with excess acidity, as it helps neutralize the acid in their body.
